[UX/UI]: Pagination Layout Improvement Suggestion

Reporter: Joshua Acciarri

Date: 05/08/2025

Environment: QA Env (URL: <https://club-administration.qa.qubika.com/#/auth/login>)

Found on: Chrome 136 (Windows 11)

Credentials: Email: *test.qubika@qubika.com* | Password: *12345678*

Description:

The pagination component displays an excessive number of page buttons (e.g., +350 pages are shown simultaneously) which creates visual clutter and makes navigation harder for users. Additionally, the pagination row is slightly misaligned with the table content, which further degrades the overall user experience.

A better UX approach would be to show a concise number of page links (e.g., '1 ... 4 5 6 ... 30') along with left/right arrow navigation, or implement infinite scroll or 'Load More' patterns for improved usability.

Severity: S3 (Minor) – Visual/UI improvement suggestion.

Priority: P3 (Medium-Low) – Enhancement.

Expected Result:

Pagination should display a smaller set of page buttons with a clean layout, using left/right arrows for navigation. The pagination bar should be perfectly aligned with the table content. Pagination layout should be consistent throughout the application (different tables).

Actual Result:

The pagination bar shows all page numbers (e.g., +350 pages) at once, causing clutter, and appears clearly misaligned with the table rows. Pagination is not consistent through different tables, it depends on number of rows.

Steps to Reproduce:

1. Navigate to <https://club-administration.qa.qubika.com> and log in with valid credentials (test.qubika@qubika.com / 12345678).
2. Go to any table (e.g., 'Contribuciones').
3. Identify the pagination component at the bottom of the table.
4. Observe that 20+ page buttons are displayed simultaneously, taking excessive space and appearing misaligned.

Attachments:

Screenshot of current pagination design (misaligned and too many page buttons).
